

CUSTOM PHOTOVOLTAIC MOUNTING SYSTEM FOR FLAT ROOFS

SolRoof is a solar panel mounting system custom-designed to be adaptable for all types of flat roofs.

Applications

- Residential
- Commercial
- Industrial
- Governmental
- Off-grid

Speak to us about your project, and we will undertake the complete study.

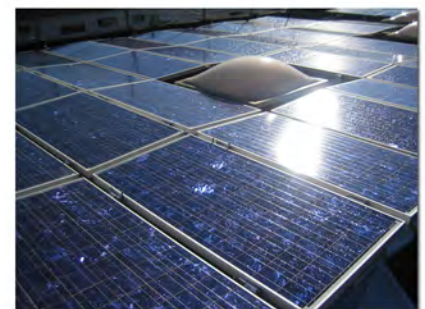

Major advantages of the SolRoof system

- A SolRoof installation will not compromise the integrity of any roof
- No puncturing or perforation of the waterproof roof membranes or roof materials
- Compatibility with all roof types and orientations
- New or old buildings
- Compatibility for installation with all standard photovoltaic panels

Principles

The steel structures holding the panels are ballasted with pre-formed concrete blocks. Each panel frame is hinged to the structure enabling full access to the roof as well as access to the every panel for any maintenance purposes.

With a SolRoof mounting system, access to the roof will meet all safety requirements.

Project quotation

Upon request, SolRoof will prepare a complete technical and financial study of the project and recommend the optimal installation configuration.
